

Oscar Arnold Coyla Urquizo

Power Automate / RPA Specialist · Full Stack Developer

Peru · +51 906 589 869 · oscarcoyladev@gmail.com [LinkedIn](#) · [GitHub](#) · [Credly](#)

Availability: 100% Remote · **Time Zone:** UTC-5 (Peru)

PROFESSIONAL SUMMARY

Power Automate / RPA Specialist and Full Stack Developer with 5+ years of experience designing, building, and deploying automated workflows and full-stack applications for the public sector. Expert in process discovery, RPA architecture, and back-office automation using Microsoft Power Automate (Cloud + Desktop Flows), Python, and custom desktop tooling (Flet, Tkinter). Proven track record integrating enterprise systems (Microsoft 365, legacy intranet APIs, internal government platforms) through session-based HTTP automation, REST/SOAP APIs, custom connectors, and webhooks. Experienced in full-stack development with NestJS, React, TypeScript, Spring Boot microservices, and cloud deployments on Microsoft Azure, AWS, and Google Cloud, with adaptable knowledge of Oracle Cloud Infrastructure (OCI). Strong foundation in relational database design, stored procedures, data replication scripts, performance optimization, and operational monitoring dashboards. Hybrid technical-audit profile (Bachelor of Law + Master's in Software Engineering) brings a unique perspective on compliance, regulatory automation, and government workflows. AI-assisted development practitioner, highly self-directed, and communicates effectively with international stakeholders in English and Spanish.

WORK EXPERIENCE

Auditor / Software Developer — SUNAT

Remote · 2020 – Present

- Engineered **DEVOL+**, a Python desktop application (Flet UI, evolved from an earlier Tkinter CLI menu-driven version) with **12 modular automation flows** and **13 shared function libraries**, integrating 3 internal SUNAT systems (Intranet, FiscaProcess, Echasqui) via session-authenticated HTTP requests (requests + BeautifulSoup), reducing case preparation time from ~3 hours to ~10 minutes per expedient — a **94% reduction** in processing time for the Devolutions team.
- Built a rule-based document acquisition engine (SQLite download tracking + BD fallback logic) that resolves the correct set of 5-10 file downloads per case based on business rules (`cod_for` / `cod_sol` codes), replacing a manual error-prone workflow across **100+ concurrent tax cases**.
- Automated an end-to-end document pipeline: RSIRAT Excel ingestion → multi-system extraction (Intranet + FiscaProcess + Echasqui) → Excel/PDF report generation → PowerPoint output, cutting document assembly time by **80%** using pandas, openpyxl, and win32com.
- Developed a companion SUNAT batch downloader (Python / Tkinter + Selenium / Chrome headless) that authenticates against SUNAT Intranet and processes bulk RUC+year input files with zero manual browser interaction.
- Designed and deployed Power Automate Cloud Flows and Desktop Flows integrating the full Microsoft 365 ecosystem (SharePoint, Outlook, Teams, Excel, OneDrive, Forms, Power Apps, Dataverse) via standard and custom connectors, reducing error rates by **70%** and increasing team throughput by **40%**.
- Designed relational database models and developed **stored procedures** for administrative data processing in high-volume transactional environments, including data replication scripts and pipelines for operational data flow between internal systems.
- Implemented **operational dashboards** for replicated data visualization and KPI monitoring, plus application and infrastructure monitoring solutions optimizing query, script, and application performance.
- Conducted process discovery sessions with business users and stakeholders to identify automation opportunities and document functional and technical requirements in English.
- Standardized process documentation and technical requirements, reducing new-hire onboarding time by **50%** through internal support applications and structured technical manuals.

Full Stack Developer — GREENDREAMS

Remote · 2025

- Architected and delivered an e-learning platform with role-based access control (student / teacher / admin), automated certificate issuance, and AI-assisted content recommendations via Azure Cognitive Services — React + TypeScript frontend, NestJS backend, MySQL database, deployed on Microsoft Azure.
- Designed the relational database model and developed the REST API layer with NestJS, exposing typed TypeScript contracts to the frontend and integrating custom Azure AI connectors.
- Configured the Microsoft Azure deployment environment applying security best practices and cloud access control policies.

Freelance Developer — Independent Digital Consultant

Arequipa, Peru · 2018 – 2020

- Developed native Android applications with Java and Android Studio for local business clients.
- Implemented technical SEO strategies, keyword analysis, and competitor audits to improve organic search visibility for multiple clients.

TECHNICAL SKILLS

Automation & RPA

AREA	TECHNOLOGIES
Power Automate	Cloud Flows, Desktop Flows, standard connectors, custom connectors
Microsoft 365	SharePoint, Outlook, Teams, Excel, OneDrive, Forms, Power Apps, Dataverse
Python Automation	requests, BeautifulSoup, Selenium, Playwright, pandas, openpyxl, win32com, PyInstaller
Integrations	REST & SOAP APIs, session-based HTTP auth, legacy intranet integration, webhooks, custom connectors
Other RPA	VBA Macros, AI-assisted development workflows

Software Development	
Area	Technologies
Languages	Python (primary), TypeScript, JavaScript, Java
Frontend	React, Vue.js, Vite, TailwindCSS, shadcn/ui, TanStack Query, React Router, Flet (Python), Tkinter
Backend	NestJS, Node.js, Spring Boot, TypeORM, Spring Cloud (Eureka, API Gateway)
Databases	PostgreSQL, MySQL, SQLite, Firebase — relational modeling, stored procedures, query optimization
Data Engineering	Replication scripts, large-volume transactional data processing, ETL pipelines, operational dashboards
Cloud & Infrastructure	
Area	Technologies
Cloud	Microsoft Azure, AWS (EC2, RDS, S3), Google Cloud · adaptable to Oracle Cloud Infrastructure (OCI)
DevOps	Docker, Docker Compose, Kubernetes, Terraform, CI/CD pipelines, Git, GitHub
Monitoring	Application & infrastructure monitoring, operational KPI dashboards, performance optimization
Architecture	High-availability system design, monolith-to-microservices migration, layered architecture, REST API design
Security	Secure development practices, cloud access control, session & authentication management
Education	
Master's Degree in Software Engineering and Computer Systems Universidad Internacional de La Rioja (UNIR) · <i>March 2025 – January 2026</i>	
Certified Tech Developer Digital House · <i>2023 – 2024</i>	
Bachelor of Law Universidad Nacional de San Agustín (Arequipa, Peru) · <i>2018</i>	
Certifications	
- Associate Cloud Engineer — Google Cloud · <i>February 2026</i> - AWS Certified Cloud Practitioner — Amazon Web Services · <i>November 2025</i> - Azure Fundamentals (AZ-900) — Microsoft · <i>April 2025</i>	
Key Projects	
DEVOL+ — Tax Case Management & Automation Platform	
Python · Flet · SQLite · requests · BeautifulSoup · pandas · openpyxl · win32com · PyInstaller · Tkinter	
Modular desktop platform for SUNAT's Devolutions team. Architecture: originally a Tkinter CLI menu-driven controller, later migrated to a Flet UI (with the default terminal hidden from end users while still exposing internal request status for debugging). Orchestrates 12 automation flows (new cases, assignment Excel loading, RSIRAT ingestion, intranet downloads, report generation, PPTT/PDF conversion, notifications, letters, Echasqui, pending restarts) backed by 13 shared function libraries and a SQLite persistence layer with per-document download state tracking. Authenticates against 3 SUNAT internal systems (Intranet at intranet.sunat.peru , FiscaProcess, Echasqui) via session cookies and BeautifulSoup HTML parsing. Applies business rules to select 5-10 document downloads per case type. Exported as a Windows <code>.exe</code> via PyInstaller. Reduced document preparation cycle from ~3 hours to ~10 minutes — 94% time reduction — across 100+ concurrent tax cases.	
SITRAUS — Union Member Portal	
React · TypeScript · Vite · TailwindCSS · shadcn/ui · TanStack Query · React Router	
Production-ready SPA for SITRAUS (Sindicato de Trabajadores de SUNAT, régimen 728). 8-route public portal featuring: official union announcements with server-side pagination, photo gallery with Lightbox, union affiliation form, law project page, and member login. Implements mobile-first responsive design with an animated hamburger menu. Built with shadcn/ui component library, TanStack Query for data management, and React Router for client-side routing.	
NoteApp — Authenticated Notes Platform (Full Stack)	
NestJS · TypeORM · PostgreSQL · bcrypt · React · Vite · TailwindCSS	
Full-stack application with a NestJS backend organized into 4 independent modules (Auth, Users, Notes, Tags). Security layer: bcrypt password hashing (10 salt rounds) + email/password authentication. Data model: <code>User → OneToMany → Note</code> , <code>Note ↔ ManyToMany ↔ Tag</code> with JoinTable. Full-text, case-insensitive search via TypeORM <code>QueryBuilder</code> across title, content, and tag names. Archive state per note. React + Vite frontend with Dashboard, NoteEditor, and NoteList components consuming a typed REST API. Deployed on AWS EC2 + Amazon RDS.	
Relatos de Papel — Spring Boot Microservices	
Java · Spring Boot · Netflix Eureka · Spring Cloud Gateway · Docker Compose	
Distributed bookstore backend with 4 containerized services: a Netflix Eureka service registry (<code>@EnableEurekaServer</code>), a Spring Cloud API Gateway with dynamic service discovery (<code>@EnableDiscoveryClient</code>), a book catalog microservice (<code>ms-books-catalogue</code>), and a payments microservice (<code>ms-books-payments</code>). Services register at startup with Eureka and route through the gateway without hardcoded URLs. Full environment orchestrated with Docker Compose.	
Tourism Booking — Travel Reservation Platform	

Vite.js · NestJS · Node.js · MySQL · AWS EC2 · Amazon RDS

Full-stack web booking application with a Vite.js frontend, NestJS / Node.js backend, and MySQL database. Deployed on AWS EC2 with Amazon RDS persistence and an elastic IP. Includes relational database modeling, REST API design, and a layered architecture suitable for production travel reservation workflows.

DH Odonto — Dental Clinic SPA

React · REST API integration · Form validations · Theme-based UI/UX

React SPA focused on REST API consumption, form validation, and themed UI/UX for a dental clinic management context. Demonstrates clean component architecture, controlled forms, and reusable design tokens.

Web Scraping Toolkit — Anti-Detection & Session Management

Python · Playwright · Selenium · CookieManager · Human Behavior Simulation

Multi-target scraping toolkit built through 10+ iterative refactor cycles. Facebook Group Scraper: Playwright/Chromium with `--disable-blink-features=AutomationControlled`, cookie-based session persistence (validates `c_user`, `xs`, `datr` critical tokens), human-delay simulation, and comment extraction. AA.com scraper: async Playwright with modular `CookieManager` (Akamai token tracking, session warm-up, age validation), random mouse movement simulation, and retry logic with progressive backoff.
