PROFESSIONAL SUMMARY

RPA Specialist with 6+ years automating business processes end to end in the public sector, across low-code and code-first toolchains. Ships attended and unattended automations with Power Automate Cloud and Desktop Flows over Microsoft 365, and works in Python when the target system exposes no API - session-authenticated HTTP, HTML parsing, or UI-level RPA over legacy Windows desktop applications. Sole developer and originator of DEVOL+, a production platform sustained since March 2025 that cut the per-case work cycle ~91% and is used by ~100 people across 5 operational units. Owns the full automation lifecycle, from discovery and ROI-based prioritization through architecture, delivery, monitoring and adoption, under Center of Excellence governance and ALM practices. Hybrid technical-audit profile: Bachelor of Law plus a Master's in Software Engineering, applied to automating regulated processes.

CORE COMPETENCIES

Robotic Process Automation (RPA)

Power Automate Cloud & Desktop Flows

Attended & Unattended Automation

Python Automation Engineering

Process Discovery & Optimization

Low-Code Governance (CoE & ALM)

WORK EXPERIENCE

SUNAT 2020 - Present

Auditor / Software Developer

Remote

- Designed and deployed automations with **Power Automate Cloud and Desktop Flows (RPA)** - automated, scheduled and business-process flows - orchestrating the Microsoft 365 ecosystem (SharePoint, Lists, Outlook, Teams, Excel, OneDrive, Forms, Dataverse) through standard, premium and custom connectors, reducing error rates by **70%** and increasing team throughput by **40%**.
- Automated the end-to-end correspondence lifecycle - drafting, numbering request, inbox monitoring, dispatch detection and formatted-letter dispatch - nearly doubling weekly throughput from **~60-70 to up to 130 letters**.
- Built **DEVOL+** as the sole developer and on own initiative, sustained since March 2025 alongside the Auditor function: **20 modular automation flows** over 21 shared function libraries, 64 REST endpoints and an async job subsystem, with 84 test modules across ~72,000 lines of Python. Scaled it from one team to **~100 users across 5 operational units**, adoption spreading by request without internal promotion.
- Cut the per-case work cycle from **~85 to ~7.5 minutes (~91%)** across **100+ concurrent cases**: retrieval ~10 min to ~30 sec, evaluation ~45 to ~5 min, assembly and archival ~30 to ~2 min; at batch level the core extraction flow dropped ~3 hours to ~10 minutes (~94%).
- Integrated **5 enterprise systems, none exposing a modern API**: three internal institutional platforms via session-authenticated HTTP and HTML parsing, an ITSM platform through a purpose-built client, and a **legacy Windows desktop application with no HTTP surface** driven by **UI-level RPA with pywinauto and pyautogui**, including an abort hotkey and pre-flight validation.
- Shipped production business applications with **Power Apps (Canvas and Model-Driven)** over **Microsoft Dataverse** - tables, relationships, business rules and security roles - plus **PCF custom components** where standard controls fell short.
- Led the area's technological transformation under Agile / Scrum, owning the low-code/RPA roadmap end to end and running discovery sessions scored on ROI, error rate, volume and feasibility; designed a standardized onboarding methodology extended to ~60 people that cut induction time by more than **50%**.

GREENDREAMS 2025 (3-month engagement)

Full Stack Developer

Remote

- Architected and delivered, as the sole developer, an end-to-end e-learning platform with role-based access control, automated certificate issuance and AI-assisted content recommendations via Azure Cognitive Services; designed the relational data model, built the REST API layer with NestJS exposing typed TypeScript contracts, and configured the Azure deployment environment (React + TypeScript, NestJS, MySQL, Microsoft Azure).

Freelance Developer

Arequipa, Peru

- Developed native Android applications with Java and Android Studio for local business clients, and produced and implemented SEO-oriented web content on WordPress.

KEY PROJECTS

DEVOL+ - Case Automation Platform

Automation platform for a tax-refund team, built solo and on own initiative. **20 automation flows** over 21 shared function libraries, 64 REST endpoints and an async job subsystem streaming progress over WebSocket; 84 test modules across ~72,000 lines of Python. The integration engine ran headless for nine months before it got a UI, rewritten twice (Tkinter CLI, Flet, local-web) - the last migration replacing only the UI layer while leaving the domain logic untouched. Integrates five enterprise systems, none with a modern API, including a legacy Windows desktop application driven by UI-level RPA. SQLite persistence (14 tables) plus an Oracle-backed access-control layer and a separate Admin application. **Per-case cycle cut ~91%; ~100 users across 5 operational units.**

Python · FastAPI · WebSocket · React 18 · TypeScript · AG Grid · pywinauto · pyautogui · BeautifulSoup · SQLite · Oracle · PyInstaller · pytest

EDUCATION

Master's Degree in Software Engineering and Computer Systems Universidad Internacional de La Rioja (UNIR)	2025 - 2026
Completed (March 2025 - January 2026)	
Certified Tech Developer Digital House	2023 - 2024
Bachelor of Law Universidad Nacional de San Agustín, Arequipa	2018

CERTIFICATIONS

Power Platform Fundamentals (PL-900)	Microsoft	August 2026
Associate Cloud Engineer	Google Cloud	February 2026
AWS Certified Cloud Practitioner	Amazon Web Services	November 2025
Azure Fundamentals (AZ-900)	Microsoft	April 2025
Power Platform Developer Associate (PL-400)	Microsoft	In progress

TECHNICAL SKILLS

RPA & Automation: Power Automate Desktop Flows (attended and unattended), Power Automate Cloud Flows (automated, scheduled, business-process), desktop UI automation (pywinauto, pyautogui), session-based HTTP automation, HTML parsing (BeautifulSoup), Playwright, Selenium, document pipelines (pandas, openpyxl, win32com), PyInstaller packaging

Power Platform: Power Apps (Canvas, Model-Driven), Microsoft Dataverse, PCF custom components, standard/premium/custom connectors, Center of Excellence (CoE), ALM and solution management, Microsoft 365 (SharePoint, Lists, Outlook, Teams, Excel, OneDrive, Forms) · REST and SOAP APIs, webhooks, legacy system integration, Azure Functions, Azure API Management, Logic Apps, monitoring and operational KPI dashboards

Programming & Data: Python (primary), TypeScript, JavaScript, Java · FastAPI, WebSocket, async job orchestration, React, NestJS, Node.js, Spring Boot · pytest, Vitest · relational modeling, stored procedures, ETL pipelines · PostgreSQL, MySQL, SQLite, Oracle · Git, CI/CD, Docker, Kubernetes, Terraform · Microsoft Azure, Google Cloud, AWS

Ways of Working: Agile / Scrum, process discovery and mapping, prioritization by ROI / error rate / volume / feasibility, spec-driven development, technical documentation in English · Spanish (native), English (advanced B2+)
